PHILOSOPHY

The goal of the philosophy program is to introduce students to a broad range of philosophical topics and issues. The methods of careful reasoning, philosophical analysis and constructive dialogue are applied to questions that concern all who seek to understand themselves, the reality of the world, the meaning and purpose of life and the way to make wise and moral choices. The subject is taught primarily as a contribution to students’ overall liberal arts education. Transfer-level curriculum is emphasized, as are interdisciplinary studies with other subject areas, particularly in the natural and social sciences.

Students who take philosophy courses in the program can expect to become better thinkers, more effective learners, more capable employees, wiser consumers and better citizens.

Program Student Learning Outcomes

Upon successful completion of the Philosophy program students will be able to:

- Ability to formulate some of the core questions of philosophy and understand various philosophical responses to them in their historical context.
- Ability to analyze and evaluate philosophical claims, arguments, and theories using rigorous philosophical methods (such as logical analysis and the identification of fallacies).
- Students will embody the qualities of an open-minded but critical thinker in the examination or formation of their philosophy.
- Ability to compare, contrast, analyze, and evaluate the views of the most influential Western philosophers and philosophical movements from a particular historical period—as found in primary or secondary sources—using rigorous philosophical methods.
- At the end of the program, the student is able to construct a novel, interesting, and logically correct argument that avoids fallacies. The student is also able to represent the logical structure of the argument (in standard logical form), as well as express and defend the argument as a short essay.
