ABOUT CONTENT

Use the Content tool to access course materials, create required activities, and arrange topics contained within each course module.

The Content tool has four main areas:

- **Course Overview** - An overview of the course and information about course expectations.
- **Bookmarks** - Lists the topics you bookmark. Click the **Add Bookmark** icon while viewing a topic to add it to your bookmarks list. The number beside the Bookmarks link indicates how many bookmarks you added within the course.
- **Upcoming Events** - Lists course material due dates, start dates, end dates, and other course events for the next seven days. Dates listed on this page are not exclusive to Content topics; upcoming events include all events within the course from the Calendar tool. The number beside the Upcoming Events link indicates how many upcoming events you have.
- **Table of Contents** - Browse course materials and assignments here.

The Content tool enables instructors to post and organize course content so that information about course expectations, course syllabus, lecture notes, and important dates display to users clearly.

Course materials you post in Content can include documents, images, media files, URL links, and activities (e.g. discussions, quizzes, surveys, self assessments, and dropbox folders). You can add release conditions, grade items, and learning objectives to topics to ensure users navigate through course materials while fulfilling specific course requirements and learning expectations.
