Start Term

Fall 2021

Catalog Course Description

This course is a survey of the Earth and the processes that shape it. The course offers an overview of earthquakes, volcanism, plate tectonics, mountain building, weathering, erosion, soil, origin of minerals and rocks, and water and energy resources. C-ID: GEOL 100.

Taxonomy of Programs (TOP) Code (CB03)

1914.00 - Geology

Course Credit Status (CB04)

D (Credit - Degree Applicable)

Course Transfer Status (CB05) (select one only)

A (Transferable to both UC and CSU)

Course Basic Skills Status (CB08)

N - The Course is Not a Basic Skills Course

SAM Priority Code (CB09)

E - Non-Occupational

Course Cooperative Work Experience Education Status (CB10)

N - Is Not Part of a Cooperative Work Experience Education Program

Course Classification Status (CB11)

Y - Credit Course

Educational Assistance Class Instruction (Approved Special Class) (CB13)

N - The Course is Not an Approved Special Class

Course Prior to Transfer Level (CB21)

Y - Not Applicable

Course Noncredit Category (CB22)

Y - Credit Course

Funding Agency Category (CB23)

Y - Not Applicable (Funding Not Used)

Course Program Status (CB24)

1 - Program Applicable

General Education Status (CB25)

Y - Not Applicable

Support Course Status (CB26)

N - Course is not a support course

Field trips

May be required

Faculty notes on field trips; include possible destinations or other pertinent information

Field trips to local area geologic sites such as local mountains, local beaches, and Santa Clara River.

Grading method

Letter Graded

Does this course require an instructional materials fee?

No

Repeatable for Credit

No

Is this course part of a family?

No

Student Learning Outcomes (CSLOs)

Upon satisfactory completion of the course, students will be able to:	
1	Describe the Plate Tectonic model for movement of the lithospheric plates.
2	Students informed in earth science will be able to list, explain, and evaluate global and local earth science hazards such as earthquakes, volcanoes, landslides, and seismic sea waves

Course Objectives

Upon satisfactory completion of the course, students will be able to:	
1	Demonstrate an understanding of the internal and external processes that shape and form the Earth.
2	Demonstrate an understanding of the rock cycle and identify and describe the basic properties of rocks and minerals.
3	Demonstrate the common methods used by geologists to study the Earth such as seismography, petrography, and radiometric age dating.
4	Explain the scientific method.
5	Demonstrate a conceptual understanding of the fundamental concepts, principles, and interactions of the Earth's systems that are applicable to the Geological Sciences.
6	Demonstrate an understanding of plate tectonics and the Earth's resources.
7	Demonstrate an understanding of how geological environments are formed, changed, and eroded through geological time.

Course Content

Lecture/Course Content

1. The Scientific Method
2. History of Geology
3. Geologic Time and Earth History
4. Relative and Absolute Dating
5. Fossils and Fossilization
6. Earth's interior
7. Characteristics and origin of the sea floor
8. Theory of plate tectonics
9. Earthquakes
10. Characteristics and origin of mountain belts

11. Folding, faulting, and the tectonic forces that act on the Earth's crust
12. Causes, locations, and effects of earthquakes
13. Concept of geological age and how it is determined
14. Mineral and rocks
15. Soils
16. Renewable and Non-Renewable Resources
17. Volcanism, extrusive rocks, and intrusive rocks
18. Weathering and soils
19. Mass wasting
20. Sediments and sedimentary rocks
21. Metamorphism and metamorphic rocks
22. Mountain Building
23. The hydrologic cycle including stream erosion and sediment deposition
24. The source, movement, and pollution of groundwater
25. Deserts and the action of wind on sediments
26. Glacial erosion and deposition
27. Waves, beaches, and coasts
28. Geological resources

Laboratory or Activity Content

None

Methods of Evaluation

Which of these methods will students use to demonstrate proficiency in the subject matter of this course? (Check all that apply):

Problem solving exercises
Written expression

Methods of Evaluation may include, but are not limited to, the following typical classroom assessment techniques/required assignments (check as many as are deemed appropriate):

Essay exams
Essays
Group projects
Individual projects
Objective exams
Oral presentations
Problem-Solving Assignments
Problem-solving exams
Quizzes
Reports/papers
Research papers

Instructional Methodology

Specify the methods of instruction that may be employed in this course

Audio-visual presentations
Computer-aided presentations
Collaborative group work
Class activities
Class discussions
Distance Education
Demonstrations
Field trips
Group discussions
Guest speakers
Instructor-guided interpretation and analysis
Internet research
Lecture
Small group activities

Describe specific examples of the methods the instructor will use:

1. Hands on demonstration and illustration of the rock cycle. Student groups are given samples of rocks and asked to identify where they fit in the rock cycle.

2. In class viewing of PowerPoint, videos, and Google Earth to analyze the scale of geologic events such as earthquakes, mountain building, and volcanism.
3. Instructor led discussions of significant geologic events that affect Southern California, such as landslides, earthquakes, and beach erosion.

Representative Course Assignments

Writing Assignments

1. Assigned exercises (e.g., cause of earthquakes, origin of the Cascade Mountain chain) are to be completed by students outside of class and turned in for evaluation and grading.
2. Summarize the pertinent information from videos on key areas of study.
3. Essay assignment such as describing the meandering in the Santa Clara River.

Critical Thinking Assignments

1. Propose how to reduce the impact of beach erosion at Hueneme
2. Consider the erosion system and how it affects where we live.

Reading Assignments

1. Each chapter of text studied in class is to be read by students prior to the corresponding lecture. For example, the chapter about earthquakes will be read by students prior to the earthquake lectures.
2. Students may be assigned reading of selected articles on physical geology topics using journals/periodicals such as : Scientific American, Nature, and National Geographic.

Other assignments (if applicable)

1. Visit Hueneme Beach and observe the beach erosion. Recognize the geologic structures.
2. Join a group for a field activity that protects or restores the natural landscape. Recognize the geologic processes or principles impacting the area.

Outside Assignments

Representative Outside Assignments

1. Write notes in the workbook from provided information or textbook to prepare for exams.
2. Answer essay questions describing earth's systems
3. Write a summary of instructor-made videos and other video resources.
4. Participate in on-line discussion boards on course material and present relevant questions and answers
5. Use on-line learning tools and practice quizzes to prepare for exam.
6. Visit a local area and interpret natural phenomena discussed in class.
7. Join a group for a field activity that protects or restores a natural landscape, or relates to natural resources.

Distance Education Addendum

Definitions

Distance Education Modalities

Hybrid (51%–99% online)

Hybrid (1%–50% online)

100% online

Faculty Certifications

Faculty assigned to teach Hybrid or Fully Online sections of this course will receive training in how to satisfy the Federal and state regulations governing regular effective/substantive contact for distance education. The training will include common elements in the district-supported learning management system (LMS), online teaching methods, regular effective/substantive contact, and best practices.

Yes

Faculty assigned to teach Hybrid or Fully Online sections of this course will meet with the EAC Alternate Media Specialist to ensure that the course content meets the required Federal and state accessibility standards for access by students with disabilities.

Common areas for discussion include accessibility of PDF files, images, captioning of videos, Power Point presentations, math and scientific notation, and ensuring the use of style mark-up in Word documents.

Yes

Regular Effective/Substantive Contact

Hybrid (1%–50% online) Modality:

Method of Instruction	Document typical activities or assignments for each method of instruction
Asynchronous Dialog (e.g., discussion board)	Regular use of asynchronous discussion boards encourages various types of interaction and critical thinking skills among all course participants. Questions and topics posed will allow students to discuss, compare and contrast, identify, and analyze elements of the course outcomes. Other discussion boards may be used for Q&A and general class discussion by students and instructor to facilitate student success and strengthen student learning outcomes.
E-mail	E-mail, class announcements and various learning management system tools will be used to regularly communicate with all students on matters such as clarification of class content, reminders of upcoming assignments and/or course responsibilities, to provide prompt feedback to students on coursework to facilitate student learning outcomes, or to increase the role of an individual educator in the academic lives of a student. Students will be given multiple ways to email instructor through both the learning management system inbox and faculty provided email accounts.
Synchronous Dialog (e.g., online chat)	Instructor may provide a set time each week where s/he will be available for synchronous chat and be available in the discussion board and can answer questions in live time.
Video Conferencing	Video tools such as ConferZoom can be used to provide live synchronous or asynchronous sessions with students. ADA compliance will be upheld with Closed Captioning during the session or of the recorded session. Video Conferences will be used to facilitate SLOs and student-to-student group meetings will also be encouraged.
Face to Face (by student request; cannot be required)	Students will have direct face-to-face contact with instructor during weekly class meetings. This time will provide the opportunity for students to discuss and ask questions about the material to facilitate student learning objectives and course outcomes. The instructor will also hold weekly, scheduled office hours for students to be able to meet and discuss course materials or individual progress. Students can request additional in-person or web conferencing meetings with faculty member as needed. Faculty may encourage online students to form "study groups" in person or online.

Hybrid (51%–99% online) Modality:
